Results 1 - 3 of 3 short listing

1 Collective memory search 77%
Thomas Haynes
Proceedings of the 1997 ACM symposium on Applied computing April 1997

2 Automated learning of decision rules for text categorization 77%
Chidanand Apté , Fred Damerau , Sholom M. Weiss
ACM Transactions on Information Systems (TOIS) July 1994
Volume 12 Issue 3

We describe the results of extensive experiments using optimized rule-based induction methods on large document collections. The goal of these methods is to discover automatically classification patterns that can be used for general document categorization or personalized filtering of free text. Previous reports indicate that human-engineered rule-based systems, requiring many man-years of developmental efforts, have been successfully built to "read" documents and assign topics ...

3 Interactive constraint-based search and replace 77%
David Kurlander , Steven Feiner
Proceedings of the SIGCHI conference on Human factors in computing systems June 1992

We describe enhancements to graphical search and replace that allow users to extend the capabilities of a graphical editor. Interactive constraint-based search and replace can search for objects that obey user-specified sets of constraints and automatically apply other constraints to modify these objects. We show how an interactive tool that employs this technique makes it possible for users to define sets of constraints graphically that modify existing illustrations or control the creation ...
